Reconstructed or modernized roads (km)

Time savings in road transport (EUR)

FINDINGS AND CONCLUSIONS

The benefits of supported interventions were mainly in saving time in road transport and improving the accessibility of rural areas of the Banská Bystrica region as a prerequisite for the development of the territory

The achieved benefits for the evaluation deadline were limited by the fact that a large proportion of projects had not yet demonstrated achieved values

The greatest benefits of the reconstruction and modernization of class II and III roads were achieved in the districts of Brezno, Lučenec, and Poltár
