15

New buildings of school infrastructure

9

13

Renovated school infrastructure buildings

FINDINGS AND CONCLUSIONS

Regional investment coverage reflects the needs and priorities in the region

The outputs and results of the implemented projects cannot be adequately evaluated at this time

Investments in school infrastructure will not only result in better access and availability of quality primary education, but also aim to create suitable conditions for the integration of children with special educational needs, increase the level of key competencies and literacy of primary school students, and establish adequate conditions for lifelong learning through the provision of public services to the wider public

Wider use of created, respectively modernized and reconstructed primary school buildings and their equipment will create suitable conditions for building more effective relationships with the community through the provision of public services (using school infrastructure for various formal and informal activities of the local community)
